Estimast lite: Privacy policy

Estimast lite's commitment to privacy is simple: We do not track you! We do not collect or transmit your data; instead, information you submit in our app is stored privately and securely on your device.

Your information will not ever be shared with us or any third party without your explicit permission.

I hereby state, to the best of my knowledge and belief, that I have not programmed this app to collect any personally identifiable information.

All data (app preferences, job data, etc) created by the you (the user) are stored on your device only and can be simply erased by clearing the app's data or uninstalling it.

Any backups that you made can be deleted at any time from the file location on the phone where you stored them.

Explanation of permissions requested by the app.

Note: all these permissions are optional, and the app will work to a slightly lesser degree without them.

Phone	`<uses-permission android:name="android.permission.CALL_PHONE" />`	Allows you to press a single on-screen button to start a call to the client. Denying this permission means the number will be sent to the phone dialling screen, and it will be up to you to press send and start the call.

Contacts	`<uses-permission android:name="android.permission.READ_CONTACTS" />`
	
	`<uses-permission android:name="android.permission.WRITE_CONTACTS"/>`
		These permissions allow you to get a client's contact details from your phones contact list. Not allowing these permissions just means you must enter the information manually. All contact uploads are sent to the phone's contact editing screen so you can format it before saving.

Storage	`<uses-permission android:name="android.permission.WRITE_EXTERNAL_STORAGE" />`
	
	`<uses-permission android:name="android.permission.READ_EXTERNAL_STORAGE" />`
		Used to access the phones local storage for the purpose of backing up, and restoring, the app's database and preferences. The only impact denying these permissions will have been that you will not be able to back up the applications information.

If you find any vulnerability that has been inadvertently caused by me or have any further questions regarding how the application protects your privacy, then please send me an email and I will do my best to help / fix the issue.

Yours sincerely

Robert Jarvis
